

Color and then fold in half.

Then cut out insert below and glue inside your book.

If you want your child to write his own facts after research, then just use the picture to glue on one side and write your own facts on the other side.

Glue this side to your page.

## Anatomy of a coral polyp

*Coral is a type of animal that lives in colonies. Each animal consists of a polyp that is the size of an ant.*

*Polyps have stinging tentacles which they use to catch small plankton as they drift by.*

*Coral reefs have a symbiotic relationship with tiny algae called zooanthellae.*

*The algae live inside the polyp tentacles.*
